Conference Phone*

# The smart, green and economical alternative to travel

Avaya 1692 IP  
Conference Phone

When you need to connect quickly, there's no substitute for a conference call. To launch a project, reach a consensus or nail down a decision, conference calls are a proven, effective way of moving business forward. They are a must-have for companies with multiple sites and for situations where employees need to engage in fast, simple, spontaneous collaboration.

Smarter, faster and greener than traveling to face-to-face meetings, they help lower your carbon footprint, make better use of everyone's schedule, and are proven money-savers, in many cases paying for themselves in the first meeting alone.

Avaya offers conference phones for executive offices, boardrooms, conference areas, and training facilities:

- **Avaya 1692 and 2033 IP Conference Phones:** IP-based models delivering access to a full set of Avaya call server features.
- **Avaya B100 Series Conference Phones:** Superior sound quality; SIP and analog-based models with advanced features.

## Superb sound quality

Superior sound quality is a hallmark of all Avaya conference phones:

**The Avaya 1692 and 2033 IP Conference Phones** are full duplex, with noise suppression and automatic gain-control that intelligently adjusts microphone sensitivity.

## Avaya B100 Series Conference

**Phones** feature Avaya OmniSound® 2.0, a patented audio technology designed to deliver crystal-clear voice transmission. Extra noise suppression minimizes background noises and wideband voice transmission produces a 7 kHz sound signal for VoIP calls.

## Making conference calls easier and more effective

Avaya conference phones are designed to simplify communication and collaboration between people no matter where they are located:

**Reaching a large audience:** Ready out of the box for standard-size rooms (up to 300 sq. ft.), Avaya conference phones can be equipped with a pair of microphones that more than doubles the voice pickup range to more than 700 sq. ft. and over a dozen participants. To reach an even wider audience, connect Avaya B100 Series Conference Phones to a public address system.

**Easy meeting set-up:** Avaya conference phones are designed for quick and easy call setup. Soft-keys on the Avaya 2033 and 1692 IP Conference Phones are automatically labeled from the system for easy navigation of call server features. Use the conference guide on the Avaya B100 Series Conference Phones to call pre-programmed groups. Create your own phone book with the user profile feature (up to 1000 contacts per profile). Import and export contact details via the Web interface.

**Connectivity:** With Avaya conference phones, participants can connect computers (for VoIP calls), mobile phones, in-building wireless phones and regular deskphones directly to the conference phone. Switch between and combine connectivity technologies. Make VoIP calls using the 7 kHz wideband voice transmission.

**Hear the presenter:** Conference calls that involve a whiteboard presentation always place an extra burden on the presenter and remote listeners. Avaya B100 Series Conference Phones address this issue by providing a wireless headset connection so the presenter can be heard by everyone. This is a great feature for lecture situations.

**Record meetings:** When it's important to record and store meetings—for example for later review, to provide to colleagues, or to get transcriptions—take advantage of in-phone SD cards on the Avaya B100 Series Conference Phones. Capture entire meetings as audio files and/or use the conference phones as dictation devices.

## Choose the right conference phone

### **Avaya B179: SIP-based Call Handling**

#### **Usage: Board rooms, large conference rooms**

A feature-rich, SIP-based phone that supports VoIP-based calls and integrates with Avaya Aura® Communication Manager. Web-based import/export of contact details.

### **Avaya B159: Easy Connectivity**

#### **Usage: Board rooms, large conference rooms**

Enhanced connectivity for mobile, cordless, digital and IP phones. Built-in bridging supports multiple forms of connectivity simultaneously.

### **Avaya B149: Simplicity and Quality**

#### **Usage: Private offices, small to mid-sized conference rooms**

Combines superior sound quality and simple set-up via the conference guide and phone book.

### **Avaya 1692: IP-enabled**

#### **Usage: Private offices, small to large conference rooms**

The right choice for rooms up to 400 sq. ft. Optional microphone extends sound coverage. Soft keys for easy navigation, including access to a full set of Avaya Aura® features.

### **Avaya 2033: IP-enabled**

#### **Usage: Private offices and small to large conference rooms**

Full-duplex, hands-free, and 360° coverage. Easy access to Avaya Business Communications Manager, Avaya Communication Server 1000 and Avaya Communication Server 2100 features.
